

On the Subject of Totally Accurate Minecraft Simulator

Thirteen-year-old me would not be proud of this module.

This module is based off of the Minecraft map Totally Accurate Minecraft Simulator. It focuses on the arenas from 0.7.2, The Unit Overhaul Update.

- Use the table to your advantage to obtain the name of each arena.
- There are four stages to complete in this module.
- The defuser will obtain a picture of an arena in the Minecraft map and describe the picture to the expert.
- The button to the left and the right will navigate through the different names of arenas and the center button is the submit button.
- Once one stage is solved, the display will show a different arena and the submit will go back to Church Campgrounds.
- If the defuser selects a wrong name, then a strike will occur, the stages will reset, the submit button will go back to Church Campgrounds, and the display will change the arena.

Arena Description:	Arena Name:
