On the Subject of Totally Accurate Minecraft Simulator

Thirteen-year-old me would not be proud of this module.

This module is based off of the Minecraft map Totally Accurate Minecraft Simulator. It focuses on the arenas from 0.7.2, The Unit Overhaul Update.
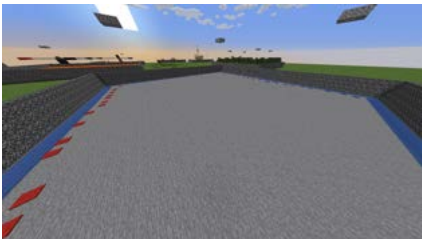

[Arena Display]

Prev [Submit] Next
- Use the table to your advantage to obtain the name of each arena.
- There are four stages to complete in this module.
- The defuser will obtain a image of an arena and describe the image to the expert.
- The expert will find the image in the tables spread across multiple pages.
- The order in the tables and on the module are in the same order of the Book of Arenas (Arenas added from November 2016 to May 2020).
- The button to the left and the right will navigate through the different names of arenas and the center button is the submit button.
- Once one stage is solved, the display will show a different arena and the submit button's text will go back to "Church Campgrounds".
- If the defuser selects a wrong name, then a strike will occur, the stages will reset, the submit button's text will go back to "Church Campgrounds", and the display will change the arena.
- To solve the module, correctly input the name of the arena shown across all four stages.
- Once the module is solved, the submit button's text will change to "Arena" and the screen will turn off.
